

User Prompt

i am testing my chatgpt, gemini, claude to md/pdf extension, can you please generate some example content that can test it?

it should test heavily the ability of my extension to get tables, code blocks, latex formulaes mathe etc, images right, and include all other things you think it should get right

i need you to so as extreme as possible since i need to test every scenario possible so include as much variety as you can generate (excluding videos, gif of course)

LLM Response

This stress test suite covers extreme edge cases across **LaTeX mathematics**, **Markdown tables**, **nested lists**, **code blocks with escaping**, **blockquotes**, **formatted inline text**, and **embedded visuals**.

1. Inline & Block LaTeX Equations

Inline formulas test spacing and inline rendering: $e^{i\pi} + 1 = 0$, $\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$, and $\sum_{k=1}^n k = \frac{n(n+1)}{2}$.

Multi-line matrix, fraction, and double-integral block test:

$$\iint_{\Omega} \left(\frac{\partial Q}{\partial x} - \frac{\partial P}{\partial y} \right) dx dy = \oint_{\partial\Omega} (P dx + Q dy)$$
$$\mathbf{J} = \begin{bmatrix} \frac{\partial f_1}{\partial x_1} & \cdots & \frac{\partial f_1}{\partial x_n} \\ \vdots & \ddots & \vdots \\ \frac{\partial f_m}{\partial x_1} & \cdots & \frac{\partial f_m}{\partial x_n} \end{bmatrix} \cdot \left(\prod_{i=1}^k \lambda_i \right)$$

2. Extreme Markdown Tables

Tests multiline text, alignment variants, inline math, line breaks (`<br>`), code formatting, and pipes inside cell content.

Alignment	Feature / Syntax	Mathematical Formula	Escaped Code & Symbols
Left	Multiline text	$f(x) = \int_{-\infty}^x e^{-t^2} dt$	pipe: symbol
	with forced line breaks		
Center	Inline Code & Bold	$\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$	HTML Tag
Right	Plain text string	$\mathbf{A}^T \mathbf{A} = \mathbf{I}_n$	price: \$99.99

3. Complex & Nested Code Blocks

Tests syntax highlighting, escaped characters, multiline strings, and regex parsing.

```
import re
from typing import List, Dict, Any

class ParserStressTest:
    """Stress test class for parsing markdown and LaTeX content."""

    def __init__(self, pattern: str = r"([a-zA-Z0-9+)]\s*\|\s*(\d+)"):
        self.regex = re.compile(pattern)

    def execute(self, payload: List[Dict[str, Any]]) -> str:
        # String escaping test: "Quotes", 'Singles', \n, \t, \\ backslashes
        raw_json = '{"key": "value\\nwith\\t escaped items"}'
        return f"Parsed {len(payload)} items -> {raw_json}"

if __name__ == "__main__":
    test = ParserStressTest()
    print(test.execute([{"test": 1}, {"test": 2}]))
```

```
// Front-end markdown rendering test
const renderMarkdown = (str) => {
```

```
const latexRegex= /\$\$([\s\S]*?)\$\$/g;
return str.replace(latexRegex, (match, group) => `

#### 4. Rich Embedded Visuals

Tests parsing of dynamic image structures, captions, and text boundaries.

#### 5. Typography, Escaped Characters & Nested Elements

Nested Blockquote Level 1: Testing blockquote parsing with formatted text.

Nested Blockquote Level 2: Contains inline math  $x^2 + y^2$  and inline code npm run build.

- Nested List Level 1

- Sub-item with italics, bold, bold-italic, and strikethrough.
- Sub-item with inline code: const x = 42; and inline equation  $a^2 + b^2 = c^2$ .

1. Deeply nested ordered list item 1.

2. Deeply nested ordered list item 2.

- Special Characters & Entities: &, <, >, ", ', \, /, @, #, $, %, ^, *.
